

NCS Exploration Recent Advances 2017

De-risking gone wrong? How to increase the commercial success rate.

Scandic Fornebu, 10-11 May 2017

CALL FOR CASE STUDIES

The program committee would like to invite all oil companies to present a case study in a fifteen-minute presentation during the session “Case studies – learnings from de-risking in practice” at the NCS Exploration 2017 conference organized by The Geological Society of Norway and GeoPublishing AS.

All abstracts are subject for review.

Abstract submission deadline: 28. February 2017

The selected abstracts for presentation will be notified within March 24 2017

ABOUT THE CONFERENCE

Despite many technical discoveries, the industry has made few commercial discoveries over the last few years. We now ask ourselves if this is due to an exploration toolbox that is insufficient for the proper de-risking of prospects?

The objective of the conference is to investigate the effectiveness of both geophysical and geochemical technologies by analysing various cases.

On behalf of the program committee
